

READY FOR POWDERMETALLURGY 4.0

Dorst Technologies presents the new

TPA 500/4 HP Next

June 19 to June 23, 2017

Expert meeting, Product demonstration, Exchange of ideas

The most successful CNC Metal Powder Press series ever built is the Dorst TPA /3HP series. Almost 300 presses are in operation around the world at leading companies in the PM-industry. Today the TPA/3HP is the productivity benchmark and became the engineering guideline for other press manufacturers.

In order to meet and tackle the challenges of the fourth industrial revolution, Dorst Technologies now introduces the next powerful press generation – the TPA series 4.0.

More efficiency, more precision, more speed, more comfort and operator support while utilizing less floor space. The new part handling robot is capable of measuring and recording both the part weight as well as part heights in real time before it leaves the press.

Please call on your Sales or Service Contact at Dorst Technologies to arrange your visit in June.

Choose the Original-Coose Success!

WE BRING CERAMICS AND METAL POWDER INTO SHAPE
